

## **Grontmij**

We will be displaying information in relation to the engineering consultancy services that we provide with a particular focus on our Transportation related services. We will be displaying our Prima100 Light Weight Deflectometer (LWD) which is used to evaluate foundations in accordance with IAN73/06 and associated specifications. We supply the equipment and also provide assessment and training services to clients as part of roads projects. All roads

We will be showing our Prima100 and the associated data collection and analysis software. We will also give an overview of the specialist pavement consultancy services that we provide to enable clients to make the most effective use of existing road pavements by partial reconstruction or overlay in place of full depth reconstruction. This has a major effect on the reduction of new aggregates used and the associated reduction in carbon footprint of construction

Grontmij have exhibited previously and found it a useful method of making contact with new and potential customers. The venue is central and available to potential clients in central Scotland. The seminar event allows us to explain to potential clients the benefits of our technology and expertise and how it can assist them, on a range of potential projects.
