

Highway Care

Highway Care will be displaying a range of barriers, end terminals, crash cushions and mobile safety equipment. These will appeal to fleet managers in the highway maintenance sector, road engineers and consultants in the highway design and maintenance sector and Traffic Management contractors/providers.

New products being launched:

LorryGuard:

LorryGuard is a lorry mounted crash cushion designed to offer protection to road workers, motorists and expensive contractor equipment. LorryGuard absorbs the energy of a rear-end impact, preventing errant vehicles from a direct impact with construction vehicles. LorryGuard is tested to NCHRP-350 Test Level 3, so is designed to withstand impacts of vehicles up to 2,000kg at speeds up to 100 km/h.

BarrierGuard MDS (minimum deflection system):

The BarrierGuard MDS system is a further development of the high performance BarrierGuard 800 steel barrier system which can be used for temporary and permanent installations and is listed in the 'HA Accepted EN1317 Compliant Road Restraint Systems' list. With the addition of a "T" top and anchors at 6 meter intervals along the barrier length, the BarrierGuard MDS system provides N2 Containment Level with a Working Width of W2.

Having supplied lorry mounted crash cushions for many years and now working with our partner Outreach Ltd, we are committed to maintaining good relationships with our customers. We are currently working on a range of new and exciting products and see this exhibition as an opportunity to showcase these products to existing and prospective customers in Scotland and the North of England.

Come and see us on stand AA6 where We will have the usual giveaways of key rings, pens etc.
